

The institution has recognized that increasing students' exposure to educational Information and Communication Technology (ICT) through curriculum integration can have a substantial and positive impact on student achievement, particularly in the current pandemic situation. The institution actively encourages teachers and students to familiarize themselves with ICT and online teaching tools. To enhance this effort, the institution provides facilities with essential infrastructure, including four ICT-enabled classrooms, computers, LCD projectors with screens, sound systems, LAN connections, Wi-Fi units, and more. Additionally, the institution promotes teacher participation in orientation/refresher courses, Faculty Development Programs (FDPs), webinars, workshops, and e-conferences.

In further support of these initiatives, the institution has arranged national seminars, talks, guest lectures, and other related events.
