

The institution acknowledges that enhancing students' exposure to Educational Information and Communication Technology (ICT) through curriculum integration can significantly and positively impact student achievement, especially in the current pandemic context. The organization encourages both teachers and students to adopt ICT and online teaching tools, offering essential infrastructure such as four ICT-enabled classrooms, computers, LCD projectors with screens, sound systems, LAN connections, Wi-Fi units, and more to facilitate this transition. Moreover, the institution emphasizes professional development by urging teachers to engage in orientation/refresher courses, Faculty Development Programs (FDPs), webinars, workshops, and e-conferences.

In further support of this endeavour, the institution has arranged national seminars, talks, guest lectures, and other relevant events.
